

<p>Operations and Algebraic Thinking Recognize God's truth through the beauty of mathematical laws.</p>
<p>Use the four operations with whole numbers to solve problems</p>
<p>1. – Interpret a multiplication equation as a comparison, e.g., interpret $35 = 5 \times 7$ as a statement that 35 is 5 times as many as 7 and 7 times as many as 5. Represent verbal statements of multiplicative comparisons as multiplication equations.</p>
<p>2. – Multiply or divide to solve word problems involving multiplicative comparison, e.g., by using drawings and equations with a symbol for unknown number to represent the problem, distinguishing multiplicative comparison from additive comparison.</p>
<p>3. – Solve multistep word problems posed with whole numbers and having whole-number answers using the four operations, including problems in which remainders must be interpreted. Represent these problems using equations with a letter standing for the unknown quantity. Assess the reasonableness of answers using mental computation and estimation strategies including rounding.</p>
<p>Gain familiarity with factors and multiples</p>
<p>4. – Find all factor pairs for a whole number in the range 1-100. Recognize that a whole number is a multiple of each of its factors. Determine whether a given whole number in the range 1-100 is a multiple of a given one-digit number. Determine whether a given whole number in the range 1-100 is prime or composite.</p>
<p>Generate and Analyze patterns</p>
<p>5. – Generate a number or shape pattern that follows a given rule. Identify apparent features of the pattern that were not explicit in the rule itself. For example, given the rule "Add 3" and the starting number 1, generate terms in the resulting sequence and observe that the terms appear to alternate between odd and even numbers. Explain informally why the numbers will continue to alternate in this way.</p>
<p>Examples with infusion: 1. - REL 4.6 - Find multiples using the Beatitudes and REL 4.6 - the Ten Commandments. 2. - Using the patterns in the Rosary to create similar patterns with numbers. 3. – REL 4.7 - Use patterns in their own personal prayers: petitions, thanksgiving, praise, contrition.</p>
<p>Number and Operations in Base Ten Understand the organization of God's creation.</p>
<p>Generalize place value understanding for multi-digit whole numbers</p>
<p>1. – Recognize that in a multi-digit whole number, a digit in one place represents ten times what it represents in the place to its right. For example, recognize that $700 \div 70 = 10$ by applying concepts of place value and division</p>
<p>2. – Read and write multi-digit whole numbers using base-ten numerals, number names, expanded form, and unit form. Compare two multi-digit numbers based on meanings of the digits in each place, using $>$, $=$, and $<$ symbols to record the results of comparisons.</p>
<p>3. – Use place value understanding to round multi-digit whole numbers to any place.</p>
<p>Use place value understanding and properties of operations to perform multi-digit arithmetic</p>
<p>4. – Fluently (efficiently, accurately, and flexibly) add and subtract multi-digit whole numbers using the standard algorithm.</p>
<p>5. – Multiply a whole number of up to four digits by one-digit whole number, and multiply two two-digit numbers, using strategies based on place value and the properties of operations. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.</p>
<p>6. – Find whole-number quotients and remainders with up to four-digit dividends and one-digit divisors, using strategies based on place value, the properties of operations, and/or the relationship between multiplication and division. Illustrate and explain the calculation by using equations, rectangular arrays, and/or area models.</p>
<p>Examples with infusion: 1. - REL 4.6 - Use a frequency table/graph for personal examination of conscience in relation to the Ten Commandments and Beatitudes. 2. – REL 4.2 - Good deeds are multiplied and continue to grow.</p>

<p>Number and Operations - Fractions Understand that we are all parts of one Church.</p>
<p>Extend understanding of fraction equivalence and ordering</p>
<p>1. – Explain why a fraction a/b is equivalent to a fraction $(n \times a) / (n \times b)$ by using visual fraction models, with attention to how the number and size of the parts differ even though the two fractions themselves are the same size. Use this principle to recognize and generate equivalent fractions.</p>
<p>2. – Compare two fractions with different numerators and different denominators, e.g., by creating common denominators or numerators, or by comparing to a benchmark fraction such as $1/2$. Recognize that comparisons are valid only when the two fractions refer to the same whole. Record the results of comparisons with symbols $>$, $=$, or $<$, and justify the conclusions, e.g., by using a visual fraction model.</p>
<p>Build fractions from unit fractions by applying and extending previous understandings of operations on whole numbers</p>
<p>3. – Understand a fraction a/b with $a > 1$ as a sum of fractions $1/b$.</p>
<p>3a. – Understand addition and subtraction of fractions as joining and separating parts referring to the same whole.</p>
<p>3b. – Decompose a fraction into a sum of fractions with the same denominator in more than one way, recording each de-composition by an equation. Justify decompositions, e.g., by using a visual fraction model. Examples: $3/8 = 1/8 + 1/8 + 1/8$; $3/8 = 1/8 + 2/8$; $2 \frac{1}{8} = 1 + 1 + 1/8 = 8/8 + 8/8 + 1/8$.</p>
<p>3c. – Add and subtract mixed numbers with like denominators, e.g., by replacing each mixed number with an equivalent fraction, and/or by using properties of operations and the relationship between addition and subtraction.</p>
<p>3d. – Solve word problems involving addition and subtraction of fractions referring to the same whole and having like denominators, e.g., by using visual fraction models and equations to represent the problem.</p>
<p>4. –Apply and extend previous understandings of multiplication to multiply a fraction by a whole number.</p>
<p>4a. –Understand a fraction a/b as a multiple of $1/b$. For example, use a visual fraction model to represent $5/4$ as the product $5 \times (1/4)$, recording the conclusion by the equation $5/4 = 5 \times (1/4)$.</p>
<p>4b. –Understand a multiple of a/b as a multiple of $1/b$, and use this understanding to multiply a fraction by a whole number. For example, use a visual fraction model to express $3 \times (2/5)$ as $6 \times (1/5)$, recognizing this product as $6/5$. (In general, $n \times (a/b) = (n \times a)/b$.)</p>
<p>4c. –Solve word problems involving multiplication of a fraction by a whole number, e.g., by using visual fraction models and equations to represent the problem. For example, if each person at a party will eat $3/8$ of a pound of roast beef, and there will be 5 people at the party, how many pounds of roast beef will be needed? Between what two whole numbers does your answer lie?</p>
<p>Understand decimal notation for fractions, and compare decimal fractions</p>
<p>5. – Express a fraction with denominator 10 as an equivalent fraction with denominator 100, and use this technique to add two fractions with respective denominators 10 and 100. For example, express $3/10$ as $30/100$, and add $3/10 + 4/100 = 34/100$.</p>
<p>6. –Use decimal notation for fractions with denominators 10 or 100. For example, rewrite 0.62 as $62/100$; describe a length as 0.62 meters; locate 0.62 on a number line diagram.</p>
<p>7. –Compare two decimals to hundredths by reasoning about their size. Recognize that comparisons are valid only when the two decimals refer to the same whole. Record the results of comparisons with the symbols $>$, $=$, or $<$, and justify the conclusions, e.g., by using a visual model.</p>
<p>Example with infusion: REL 4.5 - Identify the length of the liturgical season in fractions and decimals.</p>
<p>Measurement and Data Recognize the orderliness of God's creation</p>
<p>Solve problems involving measurement and conversion of measurements from a larger unit to a smaller unit</p>

1. –Know relative sizes of measurement units within one system of units including km, m, cm; kg, g; lb., oz.; l, ml; hr., min, sec. Within a single system of measurement, express measurements in a larger unit in terms of a smaller unit. Record measurement equivalents in a two-column table. For example, know that 1 ft. is 12 times as long as 1 in. Express the length of a 4 ft. snake as 48 in. Generate a conversion table for feet and inches listing the number pairs (1, 12), (2, 24), (3, 36), ...

2. –Use the four operations to solve word problems involving distances, intervals of time, liquid volumes, masses of objects, and money, including problems involving simple fractions or decimals, and problems that require expressing measurements given in a larger unit in terms of a smaller unit. Represent measurement quantities using diagrams such as number line diagrams that feature a measurement scale.

3. – Apply the area and perimeter formulas for rectangles in real world and mathematical problems. For example, find the width of a rectangular room given the area of the flooring and the length, by viewing the area formula as a multiplication equation with an unknown factor.

Represent and interpret data

4. – Make a data display (line plot, bar graph, pictograph) to show a data set of measurements in fractions of a unit ($\frac{1}{2}$, $\frac{1}{4}$, $\frac{1}{8}$). Solve problems involving addition and subtraction of fractions by using information presented in line plots. For example, from a line plot find and interpret the difference in length between the longest and shortest specimens in an insect collection.

Examples with infusion: 1. REL 4.5 - Identify and compare the length of specific liturgical seasons to another, i.e., how long is the season of Advent compared to the season of Lent? 2. – REL 4.6 - Use frequency table/graph for personal examination of conscience in relation to the Ten Commandments and Beatitudes. 3. - Find the area and perimeter of the base of Noah's Ark (Gen 6: 14-22).

Geometry

Identify the beauty of God's creation in geometric shapes.

Draw and identify lines and angles, and classify shapes by properties of their lines and angles

1. –Draw points, lines, line segments, rays, angles (right, acute, obtuse), and perpendicular and parallel lines. Identify these in two-dimensional figures.

2. –Classify two-dimensional figures based on the presence or absence of parallel or perpendicular lines, or the presence or absence of angles of a specified size. Recognize right triangles as a category, and identify right triangles.

3. –Recognize a line of symmetry for a two-dimensional figure as a line across the figure such that the figure can be folded along the line into matching parts. Identify line-symmetric figures and draw lines of symmetry.

Examples with infusion: 1. - Identify the shapes found in stained glass windows of a church. 2. - Use pattern blocks to create a design of a stained glass window.
